

TECHNICAL IMPLEMENTATION DOCUMENT

Project: Website & Admin Panel Enhancements

Environment: VPS (74.208.68.90)

Stack: Next.js, React Admin Panel, PM2

1. Admin Sidebar Modification

- Removed Jobs/Career category from admin sidebar.
- Updated file: app-sidebar.jsx
- Deployment: npm run build & pm2 restart client
- Verified /admin/ returns HTTP 200.

2. Hero Carousel Rebuild

- Created HomeBannerV2.jsx component.
- Dynamic slider fetch from /public/slider/getall.
- Autoplay interval set to 5 seconds.
- Infinite circular loop enabled.
- Hover zoom effect implemented (scale with transition).
- Blue active bullet indicator added.

3. Success Stories Section

- Fixed square card size (240x240).
- Exactly 4 visible cards on homepage.
- Arrows moved outside slider track.
- Consistent square layout across website.

4. Case Study Module Fixes

- Corrected routing to /case-study-detail/{encoded-title}.
- Eye icon now opens inline editor modal.
- Restored content editor field.
- Preserved existing image during update.
- Standardized square layout across site.

5. Press Release Module Updates

- Title remains main heading.
- SEO Title converted to Sub Title (optional).
- SEO Description optional.
- Default values added for status and publication dates.
- Detail page updated accordingly.

6. 'We Are' Section Update

- Updated middle metric to 300+.
- Added description text regarding Fortune 1000 clients.

7. Deployment Standardization

- Standard process: npm run build
- Restart process: pm2 restart client
- Manual validation & hard refresh (Ctrl+F5).

8. Stability Improvements

- Added fallback handling for hero slider.
- Defensive data parsing.
- Boolean normalization fixes.
- Admin form default value stabilization.

9. Architectural Improvements

- Dynamic API-driven hero section.
- Improved admin UX.
- Eliminated redirect issues.
- Consistent visual system.

10. Current System State

- Homepage fully dynamic and stable.
- Admin panel optimized and functional.
- Press and case study modules working correctly.
